Project Title

Lost & Found Portal

Project Description

Lost & Found Portal is a web-based application designed to help people report lost items and find misplaced belongings easily. Users can upload details and images of lost or found items, and the system will match related posts.

This project is simple, practical, and very useful for schools, universities, offices, and public places.

What We Are Going to Build

We are going to build a platform where users can:

- Report lost items
- Report found items
- Upload item images
- Search for matching items
- Contact the item owner/finder

The system will make the process of recovering lost belongings faster and easier.

Main Features

1. User Registration & Login

- Secure signup/login
- User profile management

2. Report Lost Item

Users can add:

- Item name
- Description
- Location lost
- Date
- Item image

3. Report Found Item

- Upload found item details
- Add image and location

4. Search & Filter

- Search by item name
- Filter by category or location

5. Matching System

- Suggest possible matches between lost and found items

6. Contact Feature

- Users can contact each other securely through the platform

7. Admin Panel

- Manage reports
- Remove fake posts
- Monitor activity

Expected Outcome

After completing the project:

- Users can recover lost belongings more easily.
 - Organizations can manage lost-and-found records digitally.
 - The process becomes faster and more organized.
-

Conclusion

Lost & Found Portal is a simple yet impactful project that helps users reconnect with their lost belongings through a centralized digital platform. It is practical, user-friendly, and suitable for beginner to intermediate developers.
